

Decon 7 105HCDU Electric Mixing Station

MODEL # 980136-D7

OVERVIEW

The Decon 7 105HCDU Electric Mixing Station blends three (3) liquid chemical products into a single solution and dispenses into any container. This unique proportioning system uses an electric pump to draw the first product from a user-supplied container and provide the fluid pressure for a venturi injector that draws in the remaining products. Metering tips control the rate at which the second and third products are drawn into the first, and the resulting solution mixes thoroughly prior to being discharged through the open flow hose. This model is pre-set to achieve the dilution ratios for the chemical Decon 7.

REQUIREMENTS

Three (3) Liquids to Mix

Electricity 120V

Discharge Hose 1/2" x 5' (Open Flow)
