

A-50 Airless Foam Wand

MODEL # BLUE-528

OVERVIEW

The A-50 Airless Foam Wand is a direct substitute for the 5-Hole Nozzle that is used on several Blue Mule wash systems. Rather than projecting liquid spray, this "Airless" Foam Wand creates a low-pressure foamy lather by drawing atmospheric air into the chemical solution as it flows through the wand - no compressed air required. This wand may work with other chemical dilution equipment, but it is specifically designed for use with Blue Mule Ultimate Wash Systems BLU42, BLU47 and BLU48.

Key Features

- This Foam Wand is a direct substitute for the Blue Mule 5-Hole Nozzle that is used on several Blue Mule systems
- Foaming expands the chemical solution and discourages over-application by providing visual assurance of coverage
- Applying foam lowers the application pressure and applies a gentle foamy lather
- Great for facilities with low water pressure
- No compressed air required
- Includes a machined polypropylene foam wand with garden hose adapter

This wand may work with other bathing systems (recirculating pumps, for example) but it is specifically designed for use with Blue Mule Ultimate Wash Systems BLU42, BLU47 and BLU48. Blue Mule cannot guarantee performance with other wash systems.

REQUIREMENTS

Blue Mule System with BLU42, BLU47, BLU48
2.3 GPM @ 40 PSI Injector

APPLICATIONS

- Pet Bathing
- Agriculture/Horticulture
- Animal Health
- Vehicle Wash
- Food & Beverage
- Janitorial/Sanitation
- Supermarkets
- And Many Other Applications!
